

DAG INSIGHTS

PREPARE FOR DIGITAL TRANSFORMATION

In today's fast-paced world, technology leaders are pulled in so many different directions, it's hard to prepare for digital transformation. And with all the uncertainty in the economy, markets and cybersecurity, it's no wonder CIOs feel the need to regain control of their environment, particularly hybrid workloads in their data centers and the cloud.

YOU CAN'T CONTROL WHAT YOU CAN'T SEE

One reason tech leaders don't have control is because they don't have visibility into the things that could help them more efficiently manage their applications and assets, cut costs, reduce risk and prepare for change.

- ▶ What if you could visualize every vulnerability in your IT environment, and know the severity of each one so you can take action?
- ▶ What if you could see resource waste, insufficient redundancy and unnecessary overlap of IT resources, so you reduce operating expenses and lower your total cost of ownership?
- ▶ What if you could improve your understanding of your data center and workload weaknesses, reducing the risk of IT failure and business interruption?

NOW YOU CAN

Introducing DAG Insights™, a comprehensive assessment in an easy-to-read dashboard that delivers insights to help you plan for digital transformation. After a DAG Insights assessment, you can:

- ▶ See everything you have, it's health, where it's operating, how it's connected and who owns it
- ▶ Know when to retire, consolidate or migrate workloads and assets based on inter-dependencies and business impact
- ▶ Quickly address vulnerabilities, enabling you to successfully mitigate business risks

Be prepared for digital transformation, or any kind of change in the industry, markets or organization.

VULNERABILITY SCAN

- ▶ Visualizes severity in a way that allows you to take action
- ▶ Lists by priority the vulnerabilities requiring immediate remedial solutions
- ▶ Highlights the complexity of the remediation solutions to be applied helping to manage operational time better

APPLICATION DEPENDENCY MAPPING

- ▶ Provides flexibility in how you want to see the data, based on what you're trying to accomplish
 - ▶ Map single or multiple applications at once, giving you the flexibility to work the way you want
 - ▶ Filter by site, application type and business unit to drill down to the details that matter to you
- ▶ Helps you confidently plan for digital transformation
 - ▶ Easily see which applications and devices are interdependent on one another, so you know before you decide
 - ▶ Intelligently sequence workload changes dependent on your business priorities
 - ▶ Minimize unnecessary downtime and business interruptions
- ▶ Know the full impact of workload downtime
 - ▶ Plan for needed redundancy, ensuring accessibility to vital applications
 - ▶ Identify any possible risk to high availability

ASSET MANAGEMENT

- ▶ Detailed inventory reports on compute, storage and network capacity, helping you to allocate resources, plan budgets, execute purchasing and more
- ▶ Complete reports on operating software versions and licenses currently in use to allow for upgrades, renewals and optimization to right-size your licensing needs

MIGRATION RECOMMENDATIONS

- ▶ Operating system disposition with recommendations that affect transformation and migrations
- ▶ Recommendations on cloud readiness including detailed reports on servers ready to be migrated into the cloud
- ▶ Maps out a comprehensive migration plan from end-to-end, giving you peace of mind for a flawless execution

THE DAG INSIGHTS DIFFERENCE

- ▶ DAG Insights leverages the accuracy and authority of an organic discovery, acting as a single source of truth for your data center and workloads
- ▶ DAG Insights works in harmony with – not in competition with – existing enterprise applications, including your DCIM, seamlessly providing you with the visibility you need control your environment
- ▶ No other solution delivers so much business intelligence all in one easy-to-read dashboard
